Clean air is not a privilege.
It is a human right.

Community air intelligence grounded in environmental rights, climate justice, and transparent data.

01 · PROBLEM

The Problem

- 7 million premature deaths every year from air pollution (WHO).
- 90%+ of people breathe air above WHO guidelines.
- Burden falls hardest on Global South communities that contributed least.
- Official data is sparse; affected people lack a voice.

02 · SOLUTION

The Solution

- Real-time modeled AQI (Open-Meteo / CAMS) + interactive map.
- Community reporting with human verification workflow.
- Hotspot comparison and statistical anomaly signals.
- Rights layer: UNGA 76/300, Paris equity, Polluter Pays, Aarhus.

03 · DIFFERENTIATOR

Why Judges Should Care

- Rights-based narrative — not just another dashboard.
- Honest about model vs sensor data and unverified reports.
- Deployable: FastAPI + React, Docker, env-ready.
- Equity framing + climate justice pillars built in.

LEGAL & JUSTICE ANCHORS

International frameworks we surface

- **UNGA 76/300 (2022)**
  Right to a clean, healthy, sustainable environment
- **Paris Agreement**
  Equity & common but differentiated responsibilities
- **UNFCCC + Aarhus principles**
  Information, participation, access to justice
- **Polluter Pays (Rio 16)**
  Accountability for industrial & burning sources

CLIMATE JUSTICE PILLARS

Distributive
Who breathes the dirtiest air?

Procedural
Who gets to speak and decide?

Intergenerational
What do we leave children?

Recognition
Who is invisible in the data?

60-SECOND DEMO FLOW

1 Search any city worldwide
2 Read AQI, PM2.5, hotspot map
3 Open Rights & Justice section
4 Submit a community observation
5 Show honesty: model ≠ sensor
